期末試験問題 (Улирлын төгсгөлийн шалгалт) - Network Basics

期末試験問題 (Улирлын төгсгөлийн шалгалт) - Network Basics

* Indicates required question

Student numbe	r & Your nar	ne *
Choose	•	

1. Consider the group of five IPv4 addresses with the subnet mask of 255.255.25.0. Select three of them that belong to the same logical network.

***** 1 point

255.255.255.0 дэд сүлжээний масктай таван IPv4 хаягийн бүлгийг авч узье. Нэг логик сүлжээнд хамаарах гурвыг сонгоно уу.

- 172.16.35.45
- 172.16.45.12
- 173.16.45.18
- 172.16.45.56
- 172.16.45.35

юу болох вэ?	
 A ping from the host to 127.0.0.1 would not be successful. The host will have to use ARP to determine the correct address of the default gateway. The host cannot communicate with hosts in other networks. The host cannot communicate with other hosts in the local network. The switch will not forward packets initiated by the host. 	
8. Which destination address is used in an ARP request frame? *	1 point

about this sechano:

Дүрслэлд хандана уу. TCP сегментийг PC1-ээс вэб сервер рүү порт 80 ашиглан илгээсэн. Гэвч хүлээгдээгүй сүлжээний алдааны улмаас өгөгдөл R1-ээр дамжуулан илгээгдсэн боловч R2-т хүрээгүй байна. Энэ нөхцөл байдлын талаар аль мэдэгдэл зөв бэ?

- R1 will request that PC1 resend the segment.
- The web server will not acknowledge this segment. The PC1 timer will expire and PC1 will resend the segment.
- The timer on R1 will expire and R1 will resend the segment to R2.
- R1 forwarded the data to R2 but R2 did not receive it. R2 will send a request to R1 to resend the segment.
